

NanoSpeed™ High Power 1x2 Solid-State Fiberoptic PM Switch

(Protected by U.S. patent 7,403,677B1 and pending patents)

Product Description

The NS High Power Series 1x2 solid-state fiber optic PM switch connects optical channels by redirecting an incoming optical signal into a selected output optical fiber. This is achieved using patented non-mechanical configurations with solid-state all-crystal designs, which eliminates the need for mechanical movement and organic materials. The NS high power fiberoptic PM switch is designed to meet the most demanding switching requirements of ultra-high reliability, fast response time, and continuous switching operation.

The device can be driven by a cost effective circuit with 12 V input voltage and a 0-5 V control signal.
