## LightBend ${ }^{T M}$ Octo $1 \times 1$ Single Mode Fiberoptic Switch (Bidirectional)

(Protected by U.S. patent 6823102 and pending patents)

## Product Description

The LB Series Octo $1 \times 1$ single mode OptoMechanical Fiberoptic switch integrated 8 simultaneously activated $1 \times 1$ switches in a single compact format. The device connects optical channels by redirecting incoming optical signals into selected output fibers. This is achieved using a patented opto-mechanical configuration and activated via an electrical control signal. Latching operation preserves the selected optical path after the drive signal has been removed. The switch has integrated electrical position sensors. This novel design significantly reduces moving part position sensitivity, offering unprecedented high stability as well as an unmatched low cost. The switch is bidirectional.
We offer tight-bend-fiber version, which reduces the minimum bending radius from normal 15 mm to 7 mm . This feature enables smaller overall foot print.

## Performance Specifications

| LB Series Octo 1x1 Switch | Min | Typical | Max | Unit |

## LightBend ${ }^{\text {TM }}$ Octo $1 \times 1$ Single Mode Fiberoptic Switch

## Mechanical Dimensions (Unit:mm)

## Electrical Driving Requirements

The load is a resistive coil which is activated by applying 5V (draw $\sim 40 \mathrm{~mA}$ ). Applying too long pulse for the latching version will heat up the device. Agiltron offers a computer control kit with TTL and USB interfaces and Windows $^{\top M}$ GUI. We also offer RS232 interface as an option - please contact Agiltron sales.
