LightBend $^{\text {TM }}$ Quad $1 \times 1$ Single-Mode Fiberoptic Switch (Bidirectional)
(Protected by U.S. patent 6823102 and pending patents)
Product Description
The LB Series Quad 1x1 fiberoptic switch connects optical channels by redirecting an incoming optical signal into a selected output fiber. This is achieved using a patent pending opto-mechanical configuration and activated via an electrical control signal. Latching operation preserves the selected optical path after the driver signal has been removed. The switch has integrated electrical position sensors. The new material-based advanced design significantly reduces moving part position sensitivity, offering unprecedented high stability as well as an unmatched low cost. Electronic driver is available for this series of switches. The switch is bidirectional.

We offer tight-bend-fiber version, which reduces the minimum bending radius. This feature enables smaller overall foot print.

## Mechanical Dimensions (Unit: mm)

## Electrical Connector Configurations

The load is a resistive coil which is activated by applying 5V (draw ~ 40mA). Applying too long pulse for the latching version will heat up the device. Agiltron offers a computer control kit with TTL and USB interfaces and Windows ${ }^{\text {TM }}$ GUI. We also offer RS232 interface as an option - please contact Agiltron sales.
