

# Motorized PM Fiber Optic Tunable Filter

(patent pending)

## Product Description

Based on a proprietary thin film cavity filter technology, Agiltron offers PM Fiber Optic Tunable Filter with central wavelengths ranging from 450 nm to 2000 nm. It is tunable continuously over a wide spectral range up to 80 nm. Agiltron further offers high optical power handling up to 10 W(CW) while maintaining the transmission spectral shape polarization-insensitive over the whole tuning range. Agiltron's unique high reliability and low insertion loss design presents a most cost-effective solution for OEM applications from fiber optic networks to fiber sensing interrogation. The FOTF has a build-in RS 232 computer control interface
